Gameplay The game uses the Combat Flight Simulator engine and can be played from a third-person view or in a first-person view. Players can choose to play the game alone, or as a member of the United Nations Peacekeeping Force (UNP), which is represented in the game by its in-game logo. The UNP player controls a team of up to three aircraft in either first or third person view. The team has an overall commander who can be controlled from the air, and the ability to call in other allied units (that are unlocked through the course of the game) such as ground units and SAM and AAA units. Enemy units, although invisible to the player, can be seen when they are being shot at or as they are on the ground or near a building. The game is

divided into five combat zones that are linked by teleporters. Each of the game's five main locations is based on a real-world location. The five locations are Biloxi, Italy, Cairo, Egypt, Nairobi, Kenya, and Mali. The locations in the game were all chosen to be representative of real-world conflicts that occurred between 1995 and 1997. The five locations include a large scale conflict, such as the Battle of Nairobi, to smaller scale conflicts, such as the Battle of Biloxi and Battle of Italy. This allows players to experience a large scale conflict in the middle of a densely populated area, such as a large city, and a smaller scale conflict in a small farming village or city. The game also includes five skirmishes, and a total of 10 scenarios. In addition to the game's single player mode, the game also includes a two-player cooperative mode. Players can use their own hardware configuration, or purchase a plug-in version of the game for those who have modding hardware. Development and release The game was designed around a concept of "combat flight" where the player navigates a flight mission using combat scenarios. The game uses three-dimensional terrain and buildings and allows the player to destroy everything on the ground using machine guns and rocket launchers. The game was released on May 13, 1997 and is rated "M" for mature audiences, meaning it is suitable for players 17 years and older. The game was initially planned to be a single player only game, but was changed to a two-player mode at the last minute. After the game was released, fans discovered that the game included a cheat code that 82157476af
